

Database week 5 Documentation

Dataset 1: Austin Animal Center – Intakes

https://data.austintexas.gov/Health-and-Community-Services/Austin-Animal-Center-Outcomes/gsvs-yip7/about_data

- **Source:** City of Austin Open Data Portal
- **Publication Date:** Continuously updated (Active municipal dataset since 2013)
- **License:** Public Domain / Open Government License

How is missing data reported?

- Some of the data has been written down as unknown or has been left empty.

How are dates formatted?

- Year, Month, Day (eg 2026 Sep 05 06:24:00 PM)

Are there duplicate records?

- There are no duplicate records.

Are there inconsistent naming conventions in your input data?

- No, there aren't any inconsistent naming conventions.

Dataset 2: Animal Shelters in North America

<https://www.kaggle.com/datasets/aaronchlegel/petfinder-animal-shelters-database>

- **Source:** Kaggle (Petfinder Database)
- **Publication Date:** April 2, 2018
- **License:** Open Database / Public Use

How is missing data reported?

- Missing data are marked as missing or left empty.

How are dates formatted?

- There are no dates.

Are there duplicate records?

- There are no duplicate records.

Are there inconsistent naming conventions in your input data?

- There aren't any inconsistent naming conventions in the data that we are gonna use in our database.

Queries:

The queries for finding the workload (number of staff and animals) per shelter and finding shelters with no vets currently employed do not work as we don't have data for staff members. However the query for finding recent animal intakes and with their shelters works after we adapted it (so it would use data we don't have). Results from the query finding recent animal intakes are meaningful as it sorts the animals based on the intake dates, but the queries about staff are not working because we don't have real data which we could use (because of privacy).

Normalization:

The resulting database with real world data is normalized to 3NF.
