

Database week 5 Documentation

Dataset 1: Austin Animal Center – Intakes

URL: https://data.austintexas.gov/Health-and-Community-Services/Austin-Animal-Center-Outcomes/gsvs-yip7/about_data

- **Source:** City of Austin Open Data Portal
- **Publication Date:** Continuously updated (Active municipal dataset since 2013)
- **License:** Public Domain / Open Government License

How is missing data reported?

Reported data	Treatment
For the columns 'Name' and 'Euthanasia Reason' some of the data has been left empty.	The empty 'Name' entries were updated to "Unknown" to eliminate empty records The empty 'Euthanasia reason' entries were updated to "N/A" to eliminate empty records
For the column 'Sex' and 'Sprayed/Neutered', some of the data has been reported as unknown	The 'Sex' column was normalized into a strict, controlled set of three values: "Male", "Female", or "Unknown". The 'Sprayed/Neutered' column was normalized into a strict, controlled set of three values: "Yes", "No", or "Unknown".

How are dates formatted?

ISO format: Year, Month, Day with time (e.g. 2026 Sep 05 06:24:00 PM)

Are there duplicate records?

There are no duplicate records.

Are there inconsistent naming conventions in your input data?

Inconsistent naming conventions	Treatment
In the 'Sprayed/Neutered' column they have 'yes' or 'Yes'	Convert all cases of lowercase y,n,u to uppercase
In the 'Name' column in row 20, the entries has additional metadata in parentheses	Removing metadata out of the 'Name' column

Dataset 2: Animal Shelters in North America

URL: <https://www.kaggle.com/datasets/aaronchlegel/petfinder-animal-shelters-database>

- **Source:** Kaggle (Petfinder Database)
- **Publication Date:** April 2, 2018
- **License:** Open Database / Public Use

How is missing data reported?

Reported data	Treatment
For the columns 'address1' and 'address2' some of the data has been left empty.	For the 'address1' column the empty entries are updated to 'Unknown', and for the 'address2' column the empty entries are updated to 'N/A'.
For the columns 'phone' and 'email' some of the data has been left empty	For both columns the empty entries are updated to 'Unknown'.

How are dates formatted?

There is no date column.

Are there duplicate records?

There are no duplicate records.

Are there inconsistent naming conventions in your input data?

Inconsistent naming conventions	Treatment
In 'address1' and 'address2' columns the streetnames are written differently.	Updating all abbreviations, like 'Rd' to 'Road'.
In the 'phone' column the formats are different and there exist some text entries instead of only number entries.	All valid numbers were stripped of non-numerical numbers, and given the standard 10 digits layout. Text entries were replaced with NULL

Queries:

The queries for finding the workload (number of staff and animals) per shelter and finding shelters with no vets currently employed do not work as we don't have data for staff members. However the query for finding recent animal intakes and with their shelters works after we adapted it (so it would use data we don't have).

Results from the query finding recent animal intakes are meaningful as it sorts the animals based on the intake dates, but the queries about staff are not working because we don't have real data which we could use (because of privacy). The main limitation of this project is that while many datasets exist regarding the animal intake and shelters, internal operational details such as staff counts and private information are unavailable. Therefore, our database could only fully work with mock data for the staff information.

Normalization:

The resulting database with real world data is normalized to 3NF, as we loaded the data to the tables separately, keeping the schema the same.
